

# HEAVYDUTY CYLINDER PROTECTION

The HeavyDuty cylinder guard is the ideal solution for operating your machine in extreme conditions where there is an increased risk of damage to the hydraulic cylinders. Precisely tailored to the specific cylinder and manufactured from high-tensile steel, it ensures reliable and comprehensive protection in every working position.

Thanks to a clever and maintenance-free sliding system, the cylinder guard remains fully functional even during long

periods of operation under the most adverse conditions. The mounting material included in the scope of delivery enables quick and straightforward installation – without any welding work or extended downtime.

The HeavyDuty cylinder guard reliably prevents damage to the piston rod, significantly extends the service life of the hydraulic components and helps to optimise maintenance intervals. Costly repairs and unplanned downtime are effectively avoided.

## BENEFITS

- ✓ Custom-fit design for your cylinder
- ✓ Easy installation without welding
- ✓ No functional limitations whatsoever
- ✓ Made of high-quality steel for maximum durability
- ✓ Maintenance-free sliding system
- ✓ Extends the service life of your hydraulic cylinder
